

The Sabin Report

July 2008

Forgotten People, Forgotten Diseases

Some of the world's most crippling diseases have been ignored despite the fact they are some of the easiest and cheapest diseases to treat.

In his new book, *Forgotten People, Forgotten Diseases*, Dr. Peter Hotez, president of Sabin, outlines in simple terms the human suffering caused by these diseases and the impact they have on economies and populations in Africa, Asia, and Central and South America.

Sabin Continues to Expand

President's Perspective

It's been two years since becoming president of the Sabin Vaccine Institute and the organization has gone through some momentous changes and growth during that time. In fact, we have deepened our commitment to building healthier nations through the control and elimination of the most common neglected diseases among the world's poor. [Read more...](#)

Global Network In the Spotlight

Former Secretary of Health and Human Services Tommy Thompson joined Sabin's Global Network as an ambassador to help save the lives of millions. Read more about this and how the "loose change" in your pocket can make all the difference to children in Africa. [Read more...](#)

Immunization Financing Program Launched

Immunization programs save hundreds of thousands of lives in the developing world, but the introduction of new vaccines will save millions more. As new, pricier vaccines enter the global market, however,

Sabin has been gaining a lot of momentum in each of its different initiatives. As a result, both the staff and board have grown significantly. Take a second to see the *new faces* of Sabin...

Celebrating 15 Years with a New Look!

After nearly two decades as leader in vaccine research and development, advocacy and delivering innovative solutions that directly benefit the world's most vulnerable populations, Sabin's Board of Trustees and senior executives have made a few adjustments to update the Sabin brand. [Find out what's in store. . .](#)

Going for Gold... 2008 Sabin Award Winners

many developing countries are struggling to finance their immunization programs. To address this growing challenge, the Sabin Vaccine Institute has launched its latest initiative. [Read more. . .](#)

A New Vaccine In Development

Thanks to generous donations by private investors, Sabin's vaccine development team is now able to focus on a long-term solution to schistosomiasis, a deadly worm disease. Learn more about the promise of this vaccine and the steady progress with Sabin's hookworm vaccine initiative in partnership with The George Washington University. [Read more...](#)

International Awareness Building

Sabin's International Advocacy team has been traveling around the globe working to help ministries of health and policy-makers better understand the science and potential behind existing vaccine programs for diseases that impact developing nations. Rotavirus, cervical cancer, and pneumococcal conferences hosted by Sabin have all generated media coverage on these issues in addition to disseminating critical findings. [Read more...](#)

Vaccine Advocacy In the News

Experts behind the Sabin name are speaking out on a range of issues impacting children. See the response to anti-vaccine propaganda and how Sabin is working to educate the public about little known diseases that are impacting thousands of African American and Hispanic children in the U.S. [Read more. . .](#)

Each year the Sabin Vaccine Institute recognizes leaders in vaccine development as part of its Gold Medal ceremony. This year, Sabin added a new award to the evening's line-up and as a result, recognized two impressive women. [*Read more...*](#)

The mission of the Sabin Vaccine Institute (SVI) is to actively reduce human suffering from infectious and neglected tropical diseases by providing greater access to vaccines and essential medicines and through programs of vaccine research, development and advocacy. SVI envisions a world without needless suffering from preventable infectious diseases. Founded in 1993, SVI builds bridges between leaders in science, academia, industry, and government to create solutions to build healthier nations.
